COHORT 16 DSML- MINI PROJECT DOCUMENTATION Crop Disease Identification Date:11/03/2026

DAY 4

Date: 11/03/2026

MACHINE LEARNING MODEL TRAINING

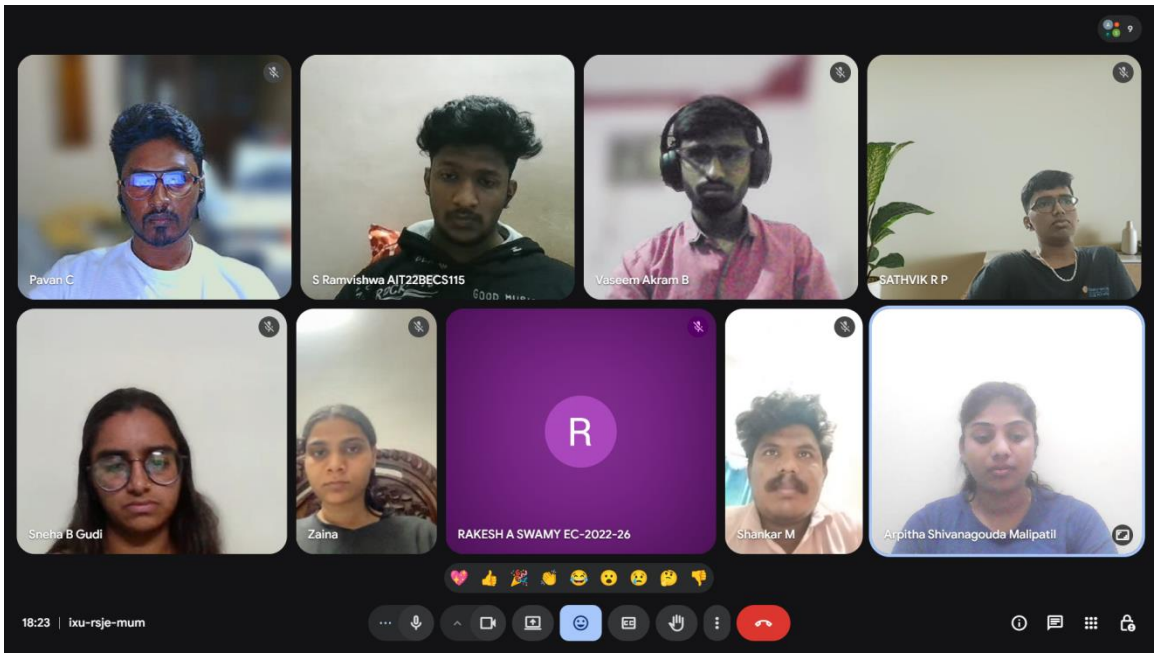
Objective

Train different machine learning models for plant disease classification and compare their performance.

Work Completed

• Implemented **Support Vector Machine (SVM)** for plant disease classification.
• Implemented **Random Forest classifier** for ensemble learning.
• Designed a **Convolutional Neural Network (CNN)** architecture for image recognition.
• Configured CNN layers including convolution, pooling, and dense layers.
• Set training parameters including optimizer, batch size, and epochs.
• Trained models using the training dataset.
• Generated predictions using the test dataset.

Outcome

Three machine learning models were successfully trained for plant disease detection.


Group Discussion: Day 4
