**DAY 5**

**Date: 12/03/2026**

**MODEL EVALUATION**

**Objective**

Evaluate the performance of different machine learning models and determine the best-performing model.

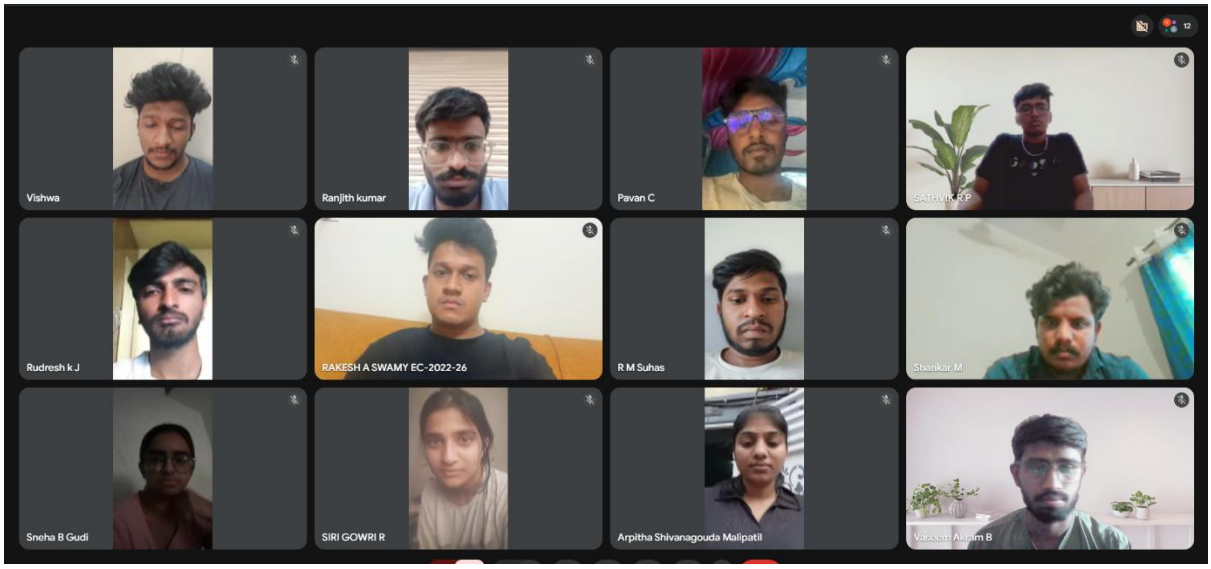
**Work Done**

- Evaluated trained models using classification accuracy.
- Compared performance of SVM, Random Forest, and CNN models.
- Generated confusion matrices for performance analysis.
- Analyzed model predictions on validation datasets.
- Observed differences in prediction capability across models.

**Performance Results**

| Model | Accuracy |
|---|---|
| Support Vector Machine | ~70% |
| Random Forest | ~66% |
| Convolutional Neural Network | ~87% |

**Outcome**

The **CNN model achieved the highest accuracy** and was selected as the final model for deployment.


# Group Discussion: Day 5
